

***Salamandra salamandra* (Fire Salamander).****Distribution.**

Date of observation: 7 January 2012. Location: Saint-Barthélemy (FWI), Saint-Jean. Coordinates: 17.901144, -62.834211. Voucher: preserved specimen housed in the Natural Reserve, Saint-Barthélemy. This salamander (87 mm total length) was found in a supermarket, in a plastic box with fresh salad from France (Loire-Atlantique), and it died two days later. Considering the geographic source, it is probably *Salamandra salamandra terrestris*. The determination of the subspecies was confirmed by Jean Raffaëlli (*Les Urodèles du monde*, 2007, Penclen Édition, 377 pp.). This is the first urodelan found as a stowaway in the West Indies (Powell R, Henderson WR, Farmer MC, Breuil M, Echternacht AC, Van Buurt G, Romagosa CM, & Perry G, 2011, Introduced amphibians and reptiles in the greater Caribbean: patterns and conservation implications. Pp. 63–143 in *Conservation of Caribbean Island Herpetofaunas*, Volume 1, Hailey A, Wilson BS, Horrocks JA, editors, Leiden, Brill).
