

***Hemidactylus mabouia* (Tropical House Gecko). Distribution.**

Date of observation: 31 October 2011. Location: Martinique (FWI), îlet Chancel. Coordinates: 14.691755, -60.891583 by Michel Breuil, one adult. 24 January 2012; Martinique (FWI), îlet Chancel. Coordinates: 14.694416, -60.894455 one adult, one juvenile; 14.692472, -60.891694 one adult by Karl Questel and Chloé Rodrigues. Voucher: image, by K. Questel. *Hemidactylus mabouia* was found in or close to old buildings and ruins. These observations are the first for this species on this island, where *Thecadactylus rapicauda* is also present but was observed only twice in old trees. *Sphaerodactylus vincenti* is unknown from this islet. (Breuil M, 2011, The terrestrial herpetofauna of Martinique: Past, Present, Future. Pp. 310–338 in *Conservation of Caribbean Island Herpetofaunas*, Volume 2, Hailey A, Wilson BS, Horrocks JA, editors, Leiden, Brill).
