

## ***Spondylurus powelli* (Anguilla Bank Skink). Reproduction.**

Date of observation: 13 June 2012. Location: Saint-Barthélemy; Lurin. Coordinates: 17.891806, -62.842917. Voucher: image. On 5 June 2012, a female was captured in the district of Lurin. Seeing that she was pregnant, she was held in captivity. The female's weight at the time of capture was 9 g, SVL 70 mm (mass to the nearest 0.5 g, length to the nearest mm). On 13 June 2012, she give birth to three young: SVL 34 mm, 1 g; 34 mm, 0.5 g; 36 mm, 1 g. Maternal weight after delivery was 6 g. A few minutes after birth, young and mother ate termites, although the female had refused to eat three days earlier. This is the first report of reproduction in this species.
