

***Eleutherodactylus juanariveroi* (Puerto Rican Wetland Frog). Reproduction.**

Date of observation: 18 June 2007. Location: Puerto Rico: Sabana Seca; Toa Baja. Coordinates: 18.43466, -66.2047. Elevation: 2 m. Voucher: video. This report documents vocalization behavior in male *Eleutherodactylus juanariveroi*. The frog was observed vocalizing from the frond of a fern (*Thelypteris interrupta*) in the swamp of Sabana Seca, approximately 0.8 m above the water. Another individual, a male very close to a clutch of eggs of this species, was attached to the interior leaf

petiole of *Sagittaria lancifolia* in the fresh water marsh, just a few centimeters above the water surface. Other amphibian species calling were *Eleutherodactylus coqui*, *E. cochranae* and *Leptodactylus albilabris*. Thanks to Neftalí Ríos, and Alberto Estrada Puerta.
