

***Osteopilus septentrionalis* (Cuban Treefrog).****Distribution.**

Date of observation: 17 May 2011. Location: Puerto Rico: Cabo Rojo; Boquerón. Coordinates: 18.032011, -67.173192. Elevation: 2 m. Voucher: image. After heavy rains (more than 4 inches) at least three males were calling from a tree, above a pool of water. This is a range extension for this introduced, invasive, species to the southwestern corner of the island. Identification verified by Jose A. Colon.
