

***Liophis juliae* (Leeward Groundsnake).
Conservation.**

Date of observation: 30 October 2010. Location: Guadeloupe, Saint-Anne, Burat. Coordinates: 16.14003, -61.23501. Voucher: image. Verified by Michel Breuil. New observation of *Liophis juliae copeae* on Guadeloupe, where the species is considered to be "very rare" (Lorvelec et al., 2007. *Applied Herpetology* 4:131-161). This species was observed at 11:35 h after a brief rain, hidden under stones and showing only its head. There was just enough time to take a picture and then the snake disappeared under the stones, not to be seen again.
